

2007 Insect and Disease Aerial Survey Cibola National Forest and Vicinity

1:275,000

The insect and disease activity depicted here is based on aerial detection surveys and should only be used as a general indicator of incidence. This map represents the mortality and defoliation that has occurred since the previous surveys in 2006. Depending upon the timing of survey, the entire extent of some insect and disease activity may not have been detected. In addition, most diseases cause gradual declines in tree health that are not typically detectable during aerial surveys. Intensity of damage is variable, thus not all trees within a mapped area are affected. Caution should be used in interpreting these results due to the scale and subjective nature of aerial sketch mapping. Areas of particular concern should be ground checked for precise determination of location and causal agent.

Cibola National Forest and adjacent tribal lands surveyed 7/12/2007 - 9/10/2007 by Daniel Ryerson, Forest Health, Southwestern Region, US Forest Service.
Gila National Forest surveyed 7/13/2007 - 9/7/2007 by Daniel Ryerson and Bobbie Fitzgibbon, Forest Health, Southwestern Region, US Forest Service.
